

<u>Causes</u>	<u>Problems</u>	<u>Solutions</u>
Too humide		Use a dehumidifier to balance the moisture.
Too dry		Use a humidifier to balance the humidity.

### Retraction

Your counter may retract by up to 1/16" per foot (12") when the ambient air humidity is under the prescribed minimum percentage, i.e. 35%.  
 Ex.: A 36" wide counter may retract by up to 3/16", the total shrinking to 35 13/16".

### Expansion

If the air's humidity exceeds the prescribed maximum percentage, i.e. 55%, the counter can expand by up to 1/16" per foot (12").  
 Ex.: A 36" wide counter may expand by up to 3/16", total width reaching 36 3/16".
